

Consultancy on Demand

How can I use my CoD hours?

Consultancy on Demand (CoD) is designed specifically for customers who need varying levels of support and consultancy. This highly flexible service allows you to purchase a block of hours to be used as and when needed.

Clients can use CoD hours on any of the following:

Database Version Upgrades

When it's time to upgrade, we can help you plan and implement the process, so it goes quickly and smoothly.

DevOps for Data

Accelerate innovation, reduce costs and increase quality. Extend traditional DevOps projects to ensure data requirements are met.

Security Review

We can safeguard your databases to reduce the risk of ransomware attacks, malware and data breaches from cybercriminals who exploit weaknesses in software.

DataOps

We'll help get your data under control so you can start using it to generate real value in every area of your business.

Consultancy

From senior project management, technical planning and technical architecture to performance tuning and systems programming.

DB2 Housekeeping and Recovery Review

We'll evaluate your database usage, data recovery capabilities and security, compare them against industry best practice and highlight potential areas of concern.

New DB2 features

Not sure which new DB2 features will benefit your business, or what to prioritise? We'll provide an overview of new features and help you implement them.

Technical Briefing Sessions and Education

Hands-on client technical workshops and training sessions on the topic of your choice. Empower your team with the information management skills they need to best accomplish their daily tasks.

DB2 Support

We offer top DB2 skills – even in older, no longer supported versions. Use CoD as an 'insurance policy' for end of support versions of DB2.

Performance Tuning and Scalability

Ensure your critical systems are performing at their best. We'll reduce response times and resource usage whilst ensuring your infrastructure and processes are robust enough to handle workload spikes.

Database Design

Bespoke database design to increase performance and reduce cost whilst driving business efficiency.

Resourcing

Finding it a challenge to identify, recruit and retain experienced skilled DBAs? Fill the gaps in your team or get cover for short-term projects.

About Triton

Triton Consulting are experts in Hybrid Data Management and Digital Transformation. The company's team of consultants represent some of the most highly experienced and qualified in the industry, and are able to advise on a range of Data Management solutions from IBM and the major cloud vendors.

Triton are internationally recognised for their expertise and can boast five IBM Gold Consultants and six IBM Champions for Data and AI, with consultants certified on AWS, Azure, GCP and IBM cloud platforms. Triton Consulting has been providing consultancy services for over 25 years.

As well as expert consultancy in all areas of data management, Triton Consulting also cover a wider spectrum of high-level consultancy including senior project management, technical planning, technical architecture, performance tuning and systems programming.
